1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4,8-12,16-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Wei et al 4,672,412. Wei discloses an image sensor (CCD) with a plurality of rows of pixels and associated circuits (first control inputs) and a plurality of columns and associated circuits (second control inputs). It is disclosed in column 9 lines 18+ that the CCD is sequentially reset row-by-row, column by column (resetting segments without resetting the entire CCD at one time). Wei discloses in column 4 lines 3-33 that there are separately addressable line segments within the individual rows of the CCD.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 2876

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a). Claims 5-7,13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wei et al 4,672,412. Wei discloses that which is seen above. Wei does not specifically disclose logic gates. However, Wei discloses in column 2 line 12 that transfer gates are used. Logic gates are old and well known. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to use logic gates as the gates of Wei in order to allow for binary manipulation of the signals and for saturation considerations.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kozlowski et al 6,535,247 and Janesick 5,844,598 both disclose reset properties of two-dimensional imaging arrays.
